Electronic Short-Circuit Protection

All hatch low-voltage transformers employ our (ESP) Electronic Short Circuit and Overload Protection. The ESP sensing circuit will instantly shut down the output before any of the components are stressed if a short circuit or overload is detected. The transformer will automatically reset as soon as the fault is corrected.

Soft Start Circuitry

All models of Hatch low-voltage transformers utilize a soft start circuitry to maximize lamp life. The soft start circuit ramps up the lamp filament voltage slowly when the lamp is cold.
